

ABB C1™
ImmunoEssentials

Trained immunity at the highest level

Researchers have shown that it is possible to train the immune system to make it react faster and more efficiently. ABB C1™ has a unique ability to modify the cells of the innate immune system. The result? A quicker, more innovative and effective response to viruses, allergies and infections.

Unique formulation

ABB C1® is a synergistic combination of three yeast-based ingredients: beta-1,3/1,6-glycan complex, selenium-rich and zinc-rich postbiotics.

How it works

Training the immune system to peak performance

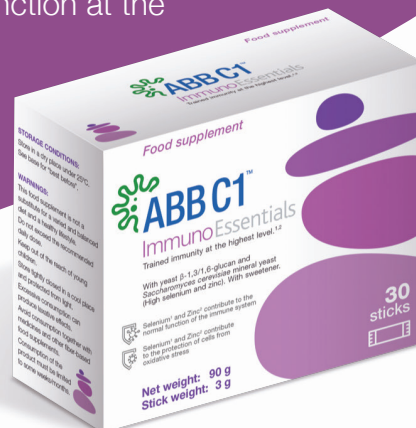

- Induces a balanced immune response without overreactions, protecting from allergy.
- Enhances the gut integrity as a first line of defense.
- Exerts microbiome modulating effects with postbiotic yeasts.
- Provides vital nutrients for viral defense.
- Faster and more intense release of antibodies (IgM) in response to vaccine antigens.
- Simultaneously reinforces innate and adaptive immune defenses
- Quicker, and more effective immune response.

Clinically proven and compatible with vaccines

ABB C1™ has been clinically demonstrated to be efficient as a vaccine adjuvant. It reduces the gap between innate and adaptive immunity, training the immune system to function at the highest level.

Wide choice

ABB C1™ is available in stick packs, capsules, tablets, snack bars, gummies and bulk powder.

Benefit of postbiotic

ABB C1® Beta-glycan is unique and revolutionary

Trained immunity at the highest level

BiomeNurturing™ Beyond Bacteria
